

Decarbonising Antarctica Discussion Forum: An example of idea sharing to overcome a common challenge

The Decarbonising Antarctica Discussion Forum began mid 2022. It is now made up of members from different National Antarctic Programs who present their obstacles and solutions to this challenge under Chatham House rules.

If you are interested in joining the forum or if you have a speaker suggestion for future meetings especially your programme's experience with renewables and wider approaches to decarbonise, we would love to hear from you.

This forum is a community of practice who learn together by sharing our challenges and solutions to implementing renewable and efficient energy systems.

Topics covered:

- Solar Power
- Wind Power
- Behaviour Change
- Building Energy Performance
- Energy Storage

The challenge of decarbonisation is too great, none of us can afford to make the same mistakes twice and by working together we can learn twice as fast!
